Back propagation neural network

实验要求:三层神经网络(输入层,隐藏层,输出层)

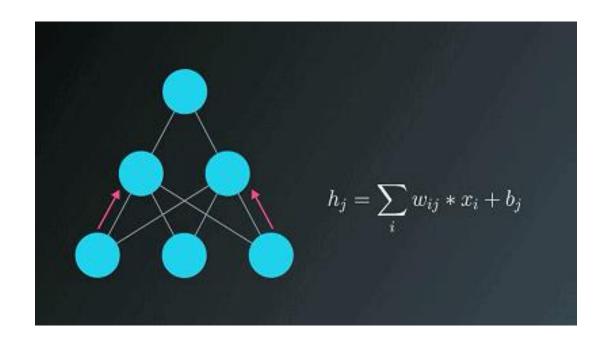

Back propagation neural network

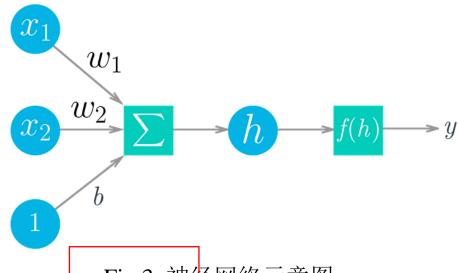

Fig.3 神经网络示意图

在这个架构中f(h)称为激活函数,这个函数可以为很多不同的函数,例如果让f(h) = h。则网络的输出为:

$$y = \sum_{i} w_i x_i + b$$

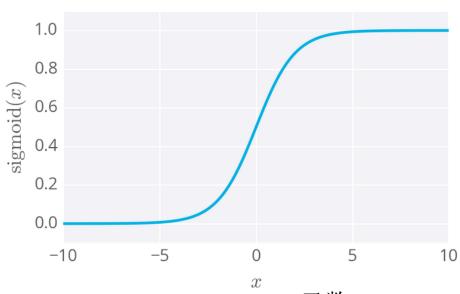

Fig.3 sigmoid函数

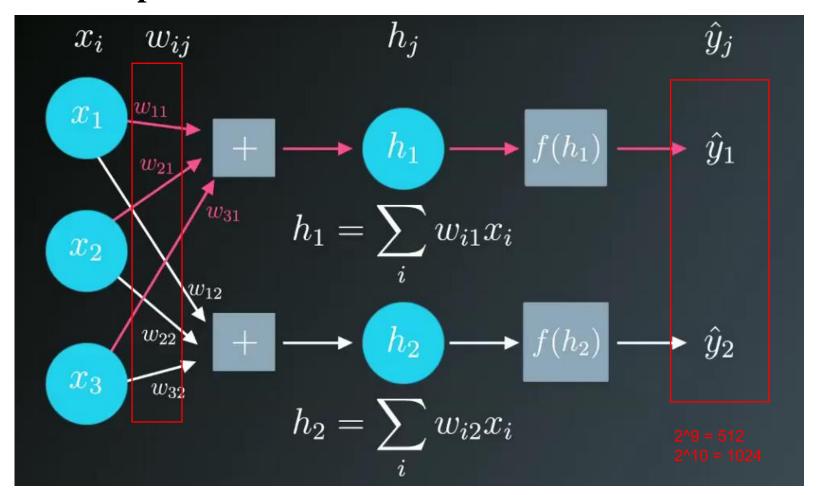

公式:

$$\operatorname{sigmoid}(x) = 1/(1+e^{-x})$$

MAX=651 min=1

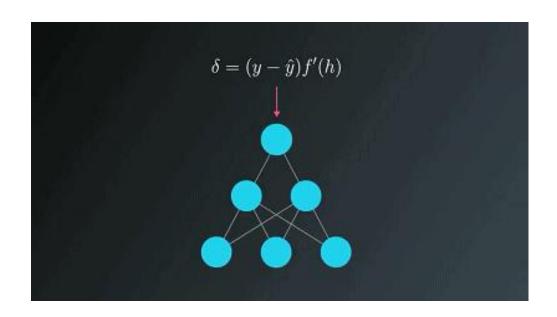

Loss function

$$ext{MSE} = rac{1}{n} \sum_{i=1}^n (\hat{Y_i} - Y_i)^2$$

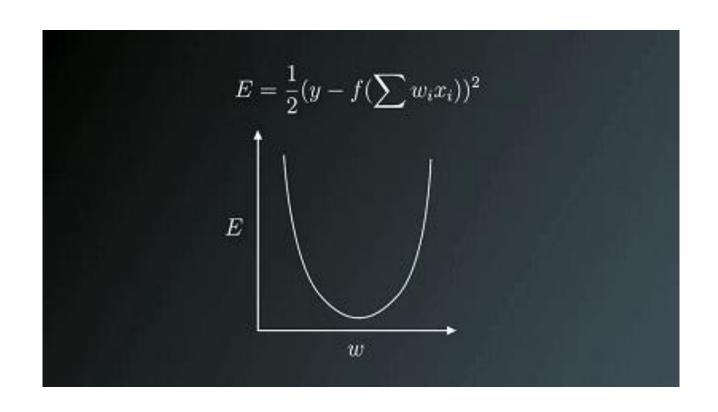

Loss function:

$$J(W,b) = \frac{1}{m} \sum_{\mathrm{i}=1}^{\mathrm{m}} J(W,b; x^{i}, y^{i}) + \frac{\lambda}{2} \sum_{l=1}^{nl-1} \sum_{\mathrm{i}=1}^{S_{l}} \sum_{j=1}^{S_{l}+1} \left(W_{ji}^{(l)}\right)^{2}$$

其中:

$$\mathbf{J}(W,b;x,y) = \frac{1}{2} \left\| h_{wb}(x) - y \right\|^2$$

$$\begin{split} \frac{\partial \mathcal{J}(W,b)}{\partial W_{ji}^{(l)}} &= \frac{1}{m} \sum_{t=1}^{m} \frac{\partial \mathcal{J}(W,b;x^{t},y^{t})}{\partial W_{ji}^{(l)}} + \lambda W_{ji}^{(l)} \\ &= \frac{1}{m} \sum_{t=1}^{m} \left(\frac{\partial \mathcal{J}(W,b;x^{t},y^{t})}{\partial Z_{j}^{l+1}} \times \frac{\partial Z_{j}^{l+1}}{\partial W_{ji}^{(l)}} \right) + \lambda W_{ji}^{(l)} \\ &= \frac{1}{m} \sum_{t=1}^{m} \left(\delta_{j}^{l+1} \times \frac{\partial Z_{j}^{l+1}}{\partial W_{ji}^{(l)}} \right) + \lambda W_{ji}^{(l)} \\ &= \frac{1}{m} \sum_{t=1}^{m} \left(\delta_{j}^{l+1} \times \frac{\partial \left(\sum_{k=1}^{q} \left(W_{jk}^{l} a_{k}^{l} \right) + b_{i}^{l} \right)}{\partial W_{ji}^{(l)}} \right) + \lambda W_{ji}^{(l)} \\ &= \frac{1}{m} \sum_{t=1}^{m} \left(\delta_{j}^{l+1} \times a_{i}^{l} \right) + \lambda W_{ji}^{(l)} \end{split}$$

$$\begin{split} \frac{\partial J(W,b)}{\partial b_i^l} &= \frac{1}{m} \sum_{t=1}^m \frac{\partial J(W,b;x^t,y^t)}{\partial b_i^l} \\ &= \frac{1}{m} \sum_{t=1}^m \left(\frac{\partial J(W,b;x^t,y^t)}{\partial Z_j^{l+1}} \times \frac{\partial Z_j^{l+1}}{\partial b_i^l} \right) \\ &= \frac{1}{m} \sum_{t=1}^m \left(\delta_j^{l+1} \times \frac{\partial Z_j^{l+1}}{\partial b_i^l} \right) \\ &= \frac{1}{m} \sum_{t=1}^m \left(\delta_j^{l+1} \times \frac{\partial \left(\sum_{k=1}^3 \left(W_{jk}^l a_k^l \right) + b_i^l \right)}{\partial b_i^l} \right) \\ &= \frac{1}{m} \sum_{t=1}^m \left(\delta_j^{l+1} \right) \end{split}$$

$$w_i=w_i+\Delta w_i$$

$$\Delta w_i \propto -\frac{\partial E}{\partial w_i} \longrightarrow \text{ The gradient}$$

$$\Delta w_i=-\eta \frac{\partial E}{\partial w_i}$$

$$\frac{\partial E}{\partial w_i} = \frac{\partial}{\partial w_i} \frac{1}{2} (y - \hat{y})^2$$
$$= \frac{\partial}{\partial w_i} \frac{1}{2} (y - \hat{y}(w_i))^2$$

通过链式求导

$$\frac{\partial}{\partial z}p(q(z)) = \frac{\partial p}{\partial q}\frac{\partial q}{\partial z}$$

$$\hat{y} = f(h)$$
 where $h = \sum_i w_i x_i$
$$\frac{\partial E}{\partial w_i} = -(y - \hat{y}) \frac{\partial \hat{y}}{\partial w_i}$$

$$= -(y - \hat{y}) f'(h) \frac{\partial}{\partial w_i} \sum w_i x_i$$

$$\frac{\partial}{\partial w_i} \sum_i w_i x_i$$

$$= \frac{\partial}{\partial w_1} [w_1 x_1 + w_2 x_2 + \dots + w_n x_n]$$

$$= x_1 + 0 + 0 + 0 + \dots$$

$$\frac{\partial}{\partial w_i} \sum_i w_i x_i = x_i$$

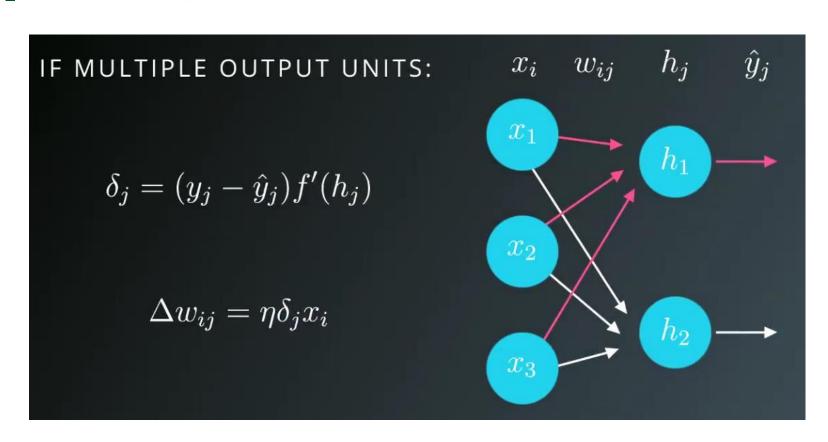

$$\frac{\partial E}{\partial w_i} = -(y - \hat{y})f'(h)x_i$$

$$\delta = (y - \hat{y})f'(h)$$

$$w_i = w_i + \eta \delta x_i$$

h+1层的误差为 δ_k^{h+1} , h层节点 j 的误差即为h+1层误差乘以两层间的权重矩阵

$$\delta_j^h = \sum W_j \delta_k^{h+1} f'(h_j)$$

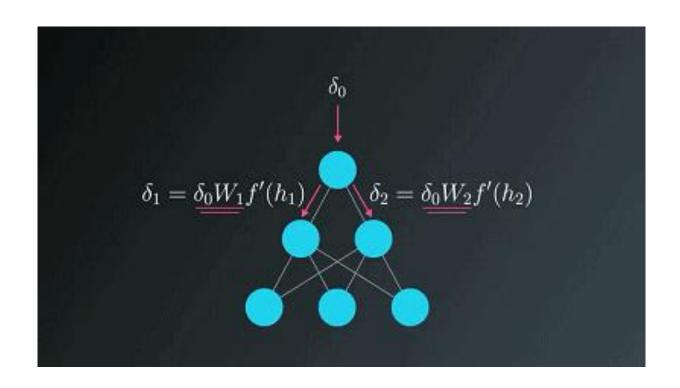

梯度下降与之前相同, 只是用当前层的误差

$$\Delta w_{ij} = \eta \delta_j^h x_i$$

$$\begin{split} \frac{\partial E_d}{\partial net_j} &= \sum_{k \in Downstream(j)} \frac{\partial E_d}{\partial net_k} \frac{\partial net_k}{\partial net_j} \\ &= \sum_{k \in Downstream(j)} -\delta_k \frac{\partial net_k}{\partial net_j} \\ &= \sum_{k \in Downstream(j)} -\delta_k \frac{\partial net_k}{\partial a_j} \frac{\partial a_j}{\partial net_j} \\ &= \sum_{k \in Downstream(j)} -\delta_k w_{kj} \frac{\partial a_j}{\partial net_j} \\ &= \sum_{k \in Downstream(j)} -\delta_k w_{kj} \frac{\partial a_j}{\partial net_j} \\ &= \sum_{k \in Downstream(j)} -\delta_k w_{kj} a_j (1-a_j) \\ &= -a_j (1-a_j) \sum_{k \in Downstream(j)} \delta_k w_{kj} \end{split}$$

Background of the project

In this project, you'll build your first neural network and use it to predict daily bike rental ridership.

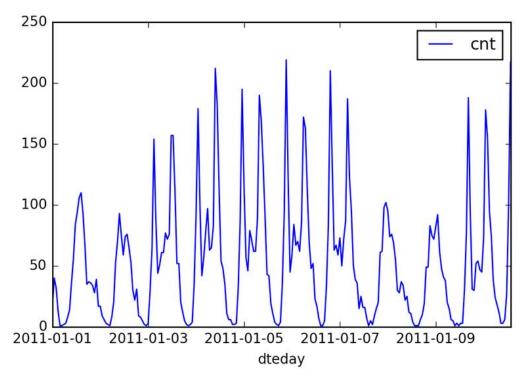

Fig. 4 Subset of the data

Load and prepare the data

```
[2]: data_path = 'Bike-Sharing-Dataset/hour.csv'
         rides = pd. read csv(data path)
   [3]:
         rides. head()
In
Out[3]:
            instant dteday
                                season | yr | mnth | hr |
                                                     holiday
                                                              weekday

                                                     0
                                                              6
```

Fig. 8 show the dataset

Build the Network

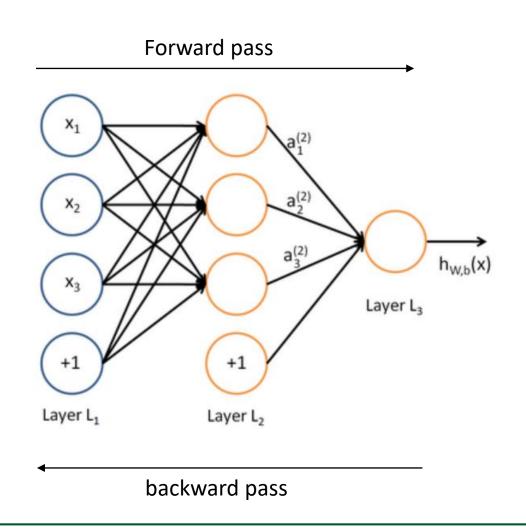

TODO list:

- 把每一层权重更新的初始步长设置为 0
 - ullet 输入到隐藏层的权重更新是 $\Delta w_{ij}=0$
 - ullet 隐藏层到输出层的权重更新是 $\Delta W_i=0$
- 对训练数据当中的每一个点
 - 让它正向通过网络,计算输出 \hat{y}
 - ullet 计算输出节点的误差梯度 $\delta^o=(y-\hat{y})f'(z)$ 这里 $z=\sum_j W_j a_j$ 是输出节点的输入。
 - ullet 误差传播到隐藏层 $\delta_j^h = \delta^o W_j f'(h_j)$
 - 更新权重步长:
 - $\bullet \Delta W_j = \Delta W_j + \delta^o a_j$
 - $ullet \Delta w_{ij} = \Delta w_{ij} + \delta^h_j a_i$
- 更新权重, 其中 η 是学习率, m 是数据点的数量:
 - $ullet W_j = W_j + \eta \Delta W_j/m$
 - $w_{ij} = w_{ij} + \eta \Delta w_{ij}/m$
- 重复这个过程 e 代。

Training and Validating

Training and Validating

```
plt.plot(losses['train'], label='Training loss')
  [12]:
         plt.plot(losses['validation'], label='Validation loss')
         plt.legend()
         plt.ylim(ymax=0.5)
Out[12]: (0.0, 0.5)
           0.5
                                                             Training loss
                                                             Validation loss
           0.4
           0.3
           0.2
           0.1
           0.0
                        500
                                  1000
                                             1500
                                                        2000
                                                                  2500
                                                                             3000
```

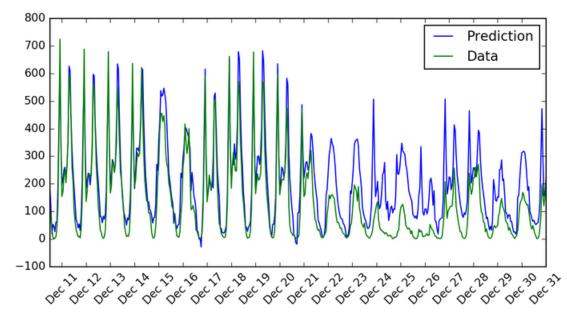

Training and Validating

```
In [13]: fig, ax = plt.subplots(figsize=(8,4))

mean, std = scaled_features['cnt']
predictions = network.run(test_features)*std + mean
ax.plot(predictions[0], label='Prediction')
ax.plot((test_targets['cnt']*std + mean).values, label='Data')
ax.set_xlim(right=len(predictions))
ax.legend()

dates = pd.to_datetime(rides.ix[test_data.index]['dteday'])
dates = dates.apply(lambda d: d.strftime('%b %d'))
ax.set_xticks(np.arange(len(dates))[12::24])
_ = ax.set_xticklabels(dates[12::24], rotation=45)
```

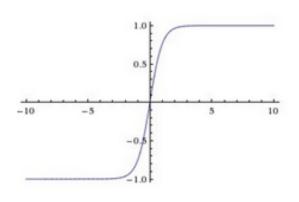

L2正则化

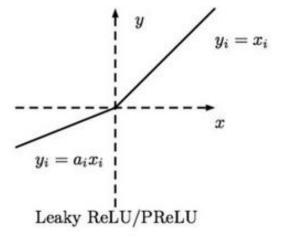

$$J(W,b) = \frac{1}{m} \sum_{\mathrm{i}=1}^{\mathrm{m}} J(W,b;x^{i},y^{i}) + \frac{\lambda}{2} \sum_{l=1}^{nl-1} \sum_{i=1}^{S_{l}} \sum_{j=1}^{S_{l+1}} \left(W_{ji}^{(l)}\right)^{2}$$

不同的激活函数

Tanh

Relu

数据预处理

多层深度神经网络

不同神经网络架构

Mini-batch

任务布置

- 必须实现三层神经网络(输入层,隐藏层,输出层)
- 必须在给出的优化建议中任意选择一项实现
- 自己划分验证集(报告里说明是怎么分的)调整参数
- 在测试集上预测,提交预测结果

思考题

- 尝试说明下其他激活函数的优缺点。
- 有什么方法可以实现传递过程中不激活所有节点?
- 梯度消失和梯度爆炸是什么?可以怎么解决?

注意事项

- •实验报告截止日期:
- •2017.12.06 晚 23:59:59 前提交至 FTP 文件 夹
- •提交文件:
 - 测试集结果: 15*****_wangxiaoming.txt 每一行对应的是测试样例的标签。
 - 实验报告: 15*****_wangxiaoming.pdf
 - 代码: 15*****_wangxiaoming.zip 如果代码分成多个文件,最好写份readme

THANKS
